

## Affordable Eco Homes

**Affordable Eco Homes** Eco homes are the environmental ratings that are given to your home with regards to natural surroundings around your home. These ratings are given by the domestic version of BREEAM that is known as Building Research Establishment Environmental Assessment Method. These eco homes were first established and were commercially used in the year 2000 and today these eco homes assessments come under four versions that are Pre-2002, 2003, 2005 and the eco homes of the current version. This latest version of eco homes has undergone vast changes, offering various eco friendly standards of living. Although the eco homes of the earlier versions included various energy saving methods, the contemporary version has even more developed the eco home that offers excellent comforts and has launched various energy saving technologies along with recycling methods. This is the reason for the growing popularity of Eco Homes, and they have also become more affordable by common man. Affordable eco homes can easily found by just consulting your real estate agent or the other best option is looking over the internet that offers various eco home sites. When you have decided for a eco home there would certainly arise questions like why to opt for a eco home, what would it cover, what are the advantages and how would you benefit with a eco home and various other questions. There are a number of reasons to opt for a eco home like these eco homes protect the planet, they form a corporate commitment, to benefit from rural economy and they offer a good sense of business. These eco homes offer you various energy saving options. These are energy saving options like there are eco labeled goods available, open drying space, they feature external and internal lighting with natural energy methods and apart from this eco home are also designed with water saving methods. There are water butts, showers, sprinkler taps ad low flush WC that save water. A number of eco homes are pollution concerned as there is public transport available, cycle storage and efficient home office methods. Apart from this these eco homes are designed with environmental impact of materials as thy use basic building elements and finishing elements and there are a few homes that are designed with recycled methods. Regarding the construction of these eco homes they are mostly designed the use of wood as the basic resource and they offer the best quality in construction. The eco home is constructed with a well organized land use as there are ecological value of site, protection of ecological features, ecological enhancement, and protection of ecological features. The surroundings of the homes are also perfectly designed as there are oak fences, trees, block paving, soak ways, vegetable patch, and wild flower bunds. Apart from the various energy saving technologies used and the perfect design of the eco homes that support the nature also offer you a well being and a healthy living. This has been the major advantage of these eco homes as they are eco friendly and are built with luxurious standards of living.
