

Eco Homes

Eco Homes Eco homes are nothing but homes that are environmental friendly. These eco homes are an environmental rating system of homes in the United States. These are domestic version of the BEEAM scheme that is also called as Building Research Establishment Environmental Assessment Method. This domestic version is also applied to a number of non residential buildings in the United States. These eco homes schemes can also be applied to social and private schemes and also in the case of major restoration. A special assessment can also be made for communal housing like care homes and student halls of residence. There are several other companies that are creating eco homes or eco friendly homes for the future. These homes are devoted to long term sustainable living as they also extend to offering luxury along with energy saving homes, which would work wisely with the environment. An eco home was first developed and used as a commercial building in the year 2000 as the consideration fall under one of the four versions which are before 2002, 2003, 2005 and the contemporary version 2006. The rating system for eco homes has undergone for major revisions and today there are 4 versions of which the latest among them is version 2006. The fact is that the 2006 version of the eco homes have increased the standards of energy effectiveness that had followed the energy efficiency version of the year 2006 to fulfill the requirements of the building regulations. The 2006 version also included a few changes and under the scheme credits are gives as the first standards for having reached in a few changes. Some of the areas that have areas that have included changes according to the eco home version 2006 are energy saving, fuel efficient transport, pollution free homes, recycling facilities, consumption of fresh water, changes in land use and ecology, managements in health and wellbeing, home management like security and home using methods. Living in an eco home or eco friendly home is one of the best options rather than fining a place in a crowded city. There are number of reasons why a eco home is much more beneficial than the other. The eco home simply means that living amidst the nature or a house surrounded by greens on all sides. However there are various advantages of living in an eco home like environmental and energy saving advantages the greatest advantage is health. There has been a research conducted by the RCLCO and Green TV to find the reason behind eco homes getting popular and the conclusion was eco friendly homes provide healthy living. According to the research a total of 42 percent the people preferred a eco home is for health reason where as 17 percent were motivated by energy savings and the remaining 12 percent for the environmental benefits. Although these eco homes have a number of advantages they also offer high standards of living with luxury that is cooperative with the nature. Nature lovers should not ever miss an opportunity to stay in Eco Homes.
